Try This Tonight

You don't need a new app or a subscription. The AI you already have — ChatGPT, Claude, or Gemini — can plan your dinners in about five minutes. Here's the exact method. Do it once and you'll feel the difference at 5 o'clock today.

What you'll need: any free AI chat app, and one minute to jot down a few things about your kitchen.

Step 1 — Your 60-Second Mini Profile

Fill in these five quick things (just in your head or on paper). You'll paste them into the AI in the next step.

People you feed	<i>e.g., 2 adults + 1 kid</i>
Weeknight time limit	<i>e.g., 30 minutes max</i>
3–5 foods you love	<i>e.g., chicken, pasta, tacos, stir-fry</i>
Foods you avoid	<i>e.g., no fish, no mushrooms</i>
Usually in your kitchen	<i>e.g., rice, eggs, canned beans, frozen veg</i>

Step 2 — Paste This Prompt

Open your AI, paste your mini profile, then paste this underneath:

Using the info above, plan 4 weeknight dinners for me.

Rules:

- Keep each dinner within my time limit
- Use foods I love; skip foods I avoid
- Lean on what's usually in my kitchen
- Then give me a short shopping list of ONLY what I'd need to buy, as a plain checklist (one item per line) I can paste into my phone

Keep it simple and skimmable.

That's it. In seconds you'll have a plan and a shopping list built around your real life. Don't love a meal? Just say “swap Tuesday for something with ground beef.”
